PRAGNYAN RAMTHA

AI Research Engineer | LLM Evaluation, RL Environments & Post-Training Data | Remote (India)

pragnyanramtha@gmail.com | +91 83318 62473 | pragnyanramtha.dev | github.com/pragnyanramtha | linkedin.com/in/pragnyanramtha

SUMMARY

AI research engineer working on LLM post-training, evaluation benchmarks, agentic coding tasks and agent harnesses. Built post-training datasets and benchmarks delivered to frontier AI labs at Parsewave. Reached **#1 on the ARC-AGI-2 public leaderboard** (Apr 2026) and merged **55+ open-source PRs** across AI frameworks.

EXPERIENCE

Parsewave — **Remote (India)**
AI Researcher / Research Engineer — *Aug 2026 – Nov 2026*

- Built end-to-end post-training data pipelines for **frontier AI labs**, curating expert SFT and RLHF datasets across reasoning, tool use and code synthesis.
- Created and audited evaluation benchmarks and agentic coding tasks for private frontier models, using deterministic execution harnesses, containerized environments, test-based verifiers and contamination checks to prevent reward hacking.
- Audited multi-turn agent trajectories and verification loops to improve data quality and post-training signal.

Agent7 (agent7.dev) — **Hyderabad, India**
Founder & Technical Lead — *Jun 2026 – Sep 2026*

- Shipped a no-code AI agent platform solo in Next.js, TypeScript and PostgreSQL, connecting **1,000+ apps** and orchestrating **20,000+ tools**.
- Designed a long-running agent engine with human-in-the-loop approvals and checkpointing, offloading **20+ hours** of weekly work.

Learnable India — **Bengaluru, India (Remote)**
Software Engineer — *May 2026 – Jun 2026*

- Built an accessibility-first learning portal and AI assistance workflows with full screen-reader support for blind learners.

Reputation Dao — **Hyderabad, India (Remote)**
Agentic AI Developer — *Aug 2025 – Jan 2026*

- Built the production agent stack on GCP and a RAG pipeline with source attribution; cut inference cost with prompt caching and batching.

SELECTED RESEARCH & PROJECTS

ARC Prize 2026: #1 on ARC-AGI-2 Public Leaderboard | *Qwen3-4B, Unsloth, LoRA, Multi-GPU* — *Apr 2026*

- Reached #1 with per-puzzle test-time training (TTT) on 4-bit Qwen3-4B LoRA adapters across dual T4 GPUs, using 16× geometric and color-permutation augmentation.
- Built a 12-token DFS beam decoder (`turbo_dfs`) with KV-cache reuse and invariance-based re-scoring. Open-sourced the notebook, which other teams forked and extended.

Terminal-Bench Agent Harness | *GLM-4.6, Python, Docker, Subagents, Trace Retention* — *2026*

- Built a 5-layer coding agent harness with entry-point discovery, runtime-enforced planning state, raw trace retention, verification triggers and parallel subagents. Tested on a local task subset.

Personality Clone | *Llama 3.1 8B, QLoRA, Siamese Networks, Fine-Tuning* — *2025*

- Fine-tuned an LLM with QLoRA and a siamese network (cosine similarity loss) to reach **92% style-replication accuracy** (+28% over baseline), exported to GGUF for local inference.

Open Source: 55+ Merged PRs | *TypeScript, Python, Go* — *2025 – 2026*

- Merged PRs in `openai-node`, `openai-go`, `langgraphjs`, `pydantic-ai`, `mistral-common`, MCP TypeScript SDK, OpenPipe ART, `agno`, `ag2`, `mastra`, `mem0`, `promptfoo`, `haystack`, `fastmcp`, `opik`, `dstack`, `lancedb`, Pinecone and 6 Dify plugins. Published a GGUF parser DoS proof of concept.

SKILLS, RESEARCH & HONORS

Evaluation & Post-Training: LLM evaluation, benchmark design and auditing, RL environments, reinforcement learning, GRPO, RLHF, SFT, fine-tuning, reward design, rubrics, verifiers, reward hacking detection, synthetic data, data quality, Terminal-Bench, Harbor.

ML & Agents: PyTorch, Transformers, Unsloth, PEFT (LoRA/QLoRA), CUDA, quantization (GPTQ, GGUF), test-time training, RAG, MCP, tool use, agent harnesses, sandboxed execution, multi-agent systems, LangGraph, Pydantic AI.

Languages & Systems: Python, TypeScript, JavaScript, Rust, C, Go, SQL, Bash. Docker, Linux, Nix, Git, CI/CD, GCP, PostgreSQL, Next.js, React, Node.js.

Certifications: Stanford ML Specialization (DeepLearning.AI), Harvard CS50x and CS50P.

Research: *Scaling Context Windows to Infinity* (long-context inference); *Unlocking Societal Trends in Aadhaar Enrolment and Updates* (ML anomaly detection).

Honors: 5× hackathon winner (IEEE Summer of Code 2025, NIAT RAG Challenge, Empathy Encryption 2025, Daydream Hyderabad, NeuroHack 2026). **Top 0.5% finalist**, Shell AI Hackathon 2025. Finalist, Smallest AI × IIT-G.
